

# **C O N T E N T S**

<b>1. Introduction</b>	<b>1</b>
1.1. Summary of contents	1
1.2. Guide to the use of the book	2
1.3. Definitions of certain terms	2
<b>2. A Critique of Current Taxonomy</b>	<b>5</b>
2.1. The ills of modern taxonomy	5
2.2. The natural system	11
2.3. Phylogenetic considerations	20
2.4. Problems of taxonomic rank	30
2.4.1. Criteria for taxonomic rank	30
2.4.2. Limits of taxa	31
2.4.3. The hierarchy of characters	34
2.4.4. Adaptive characters	35
2.5. Nomenclature	35
<b>3. New Methods in Taxonomy</b>	<b>37</b>
3.1. The development of numerical methods in taxonomy	37
3.2. Comparative serology	40
3.3. Polyphenic methods	45
3.3.1. Chromatography	45
3.3.2. Electrophoresis	46
3.3.3. Infrared spectroscopy	46
3.4. Other methods	47
	xi

<b>4. The Aims and Principles of Numerical Taxonomy</b>	<b>48</b>
4.1. Definition of numerical taxonomy	48
4.2. The aims of numerical taxonomy	49
4.3. The basic positions	50
4.4. The estimation of resemblance	50
4.5. The construction of natural taxa	52
4.6. Empirical versus phylogenetic taxonomy	55
4.7. The recognition of phyletic relationships	57
4.8. Identification of specimens	58
4.9. Nomenclature	58
<b>5. Taxonomic Evidence: Characters and Taxa</b>	<b>60</b>
5.1. Preliminary choice of specimens	60
5.2. Definition of taxonomic characters	61
5.3. Unit characters	63
5.3.1. Theoretical considerations	63
5.3.2. Working definition	65
5.3.3. Inadmissible characters	66
5.3.3.1. Meaningless characters	66
5.3.3.2. Logically correlated characters	66
5.3.3.3. Partial logical correlations	67
5.3.3.4. Invariant characters	67
5.3.3.5. Experimental error	68
5.3.3.6. Empirical correlations	68
5.3.4. Operational homology	69
5.3.5. Two-state vs. multistate characters	74
5.3.6. Recoding multistate into two-state characters	76
5.3.7. Age, growth, and allometry	79
5.4. Kinds of characters and how to choose them	84
5.4.1. The nexus hypothesis	84
5.4.2. The hypothesis of nonspecificity	85
5.4.3. The evidence for nonspecificity: taxonomic congruence	85
5.4.4. The choice of characters: Some general considerations	91

<i>Contents</i>	xiii
5.5. Phenetic versus phyletic classifications	95
5.5.1. General considerations	95
5.5.2. Convergence	105
5.5.3. Parallel evolution	108
5.6. The requisite number of characters	110
5.6.1. The hypothesis of the factor asymptote	111
5.6.2. The hypothesis of the match asymptote	114
5.6.3. How many characters?	115
5.7. The problem of weighting	118
5.8. Operational taxonomic units	120
<b>6. The Estimation of Taxonomic Resemblance</b>	<b>123</b>
6.1. Methods of estimation in various sciences	123
6.2. Estimates of resemblance proposed in taxonomy	125
6.2.1. Coefficients of association	125
6.2.1.1. Possible kinds of coefficients	128
6.2.1.2. The coefficient of Jaccard (Sneath)	133
6.2.1.3. The simple matching coefficient	133
6.2.1.4. The coefficient of Rogers and Tanimoto	133
6.2.1.5. The coefficient of Hamann	134
6.2.1.6. The coefficient of Yule	134
6.2.1.7. The phi coefficient	134
6.2.1.8. Smirnov's coefficient of similarity and the generalized coefficient of Rogers and Tanimoto	135
6.2.1.9. Comparison of coefficients	139
6.2.2. Coefficients of correlation	141
6.2.3. Measures of distance	143
6.2.3.1. Average differences	146
6.2.3.2. Taxonomic distance	147
6.2.3.3. Size and shape	151
6.2.4. Statistical significance of similarity coefficients	153
6.3. Scaling and coding characters	154
6.4. Character variation within taxa	158
6.5. Unwarranted comparisons	162
6.5.1. Missing data	162

6.5.2.	Missing characters	163
6.5.3.	Missing organs	163
6.5.4.	The estimation of resemblance when some characters are inapplicable	164
6.5.5.	Relevance	165
6.6.	Comparison and evaluation of methods	166
<b>7.</b>	<b>The Construction of a Taxonomic System</b>	<b>169</b>
7.1.	Requisites of a taxonomic system	169
7.2.	Frequency distributions of similarity coefficients	175
7.3.	Techniques for describing taxonomic structure	175
7.3.1.	Differential shading of the similarity matrix	176
7.3.2.	Cluster analysis	178
7.3.2.1.	Elementary cluster analysis	179
7.3.2.2.	Clustering by single linkage (Sneath's method)	180
7.3.2.3.	Clustering by complete linkage (Sørensen's method)	181
7.3.2.4.	Clustering by average linkage (the group methods of Sokal and Michener)	182
7.3.2.5.	Central or nodal clustering (the methods of Rogers and Tanimoto)	185
7.3.2.6.	Comparison and evaluation of clustering techniques	189
7.3.3.	Factor Analysis	194
7.4.	The representation of the results of clustering	198
7.5.	Criteria of rank	203
7.6.	The relation between Q and R techniques in numerical taxonomy	207
7.7.	The publication of results	209
7.8.	The incorporation of additional data into a classification (interstudy coordination)	210
<b>8.</b>	<b>Phylogenetic Considerations</b>	<b>216</b>
8.1.	The relation of phenetic and phylogenetic evidence	216
8.1.1.	The evolutionary basis of natural taxonomic groups	216

8.1.2.	The construction of phyletic classifications	220
8.1.3.	What phylogenetic deductions can be made from a table of affinities?	227
8.1.4.	“Primitive” characters and forms	230
8.1.5.	Can ancestral forms be included in phenetic classifications, and what is their rank?	232
8.2.	Possible contributions of numerical taxonomy to phylogenetic, genetic, and paleontological problems	235
8.2.1.	Rates of evolution	237
8.2.1.1.	Character rates	238
8.2.1.2.	Organism rates	239
8.2.2.	Speciation and the correlation of numerical taxonomy with genetic relations	242
8.2.3.	The branching of dendrograms	245
8.2.4.	Paleontological problems	246
<b>9.</b>	<b>Problems of Nomenclature</b>	250
9.1.	Nomenclatural consequences of numerical taxonomy	251
9.1.1.	The phenon nomenclature	251
9.1.2.	Stability of nomenclature	253
9.2.	Numerical taxonomy and nomenclatural problems	254
9.2.1.	Limits of taxa	254
9.2.2.	Terminology of intermediate forms	254
9.2.3.	Choice of new nomenclatural types	256
9.2.4.	Data-processing machines	257
<b>10.</b>	<b>Present Problems and Some Future Prospects</b>	258
10.1.	The accomplishments of numerical taxonomy to date	258
10.1.1.	Published applications of numerical taxonomy to different groups of organisms	258
10.1.2.	Assistance of numerical methods in some taxonomic problems	260
10.1.2.1.	Concordance between numerical taxonomic studies and established taxonomies	260
10.1.2.2.	The naturalness of taxa	261
10.1.2.3.	Concordance of numerical taxonomies with other properties of the organisms	263

10.1.2.4.	The stability of numerical taxonomies	264
10.2.	Criticisms of numerical taxonomy	264
10.2.1.	Objections on fundamental biological principles	265
10.2.2.	Considerations of convenience and practicality	267
10.2.3.	Objections to the quantification and automation of the taxonomic process (the "Man versus Machine" controversy)	270
10.3.	Some practical considerations	271
10.3.1.	Material for numerical taxonomic studies	271
10.3.2.	Techniques of numerical analysis	274
10.4.	The extraction of discriminatory features and the preparation of keys	275
10.5.	The future of systematics	278
10.6.	Other applications of numerical taxonomy	280
10.7.	Late references	284
	<b>Appendix. Computational Methods for Numerical Taxonomy</b>	290
A.1.	Choice and coding of characters	290
A.2.	The computation of coefficients of resemblance	296
A.3.	Clustering methods	305
A.4.	Miscellaneous techniques	312
A.5.	Computer programming for numerical taxonomy	317
